COMMENT

Direct Submission

Submitted (313-MAR-2001) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA On Dec 8, 1999 this sequence version replaced gi:6513881.

INFORMATION: http://www.ngsc.bcm.tmc.edu/ or email

CLONE LENGTH: This sequence does not necessarily represent the entire insert of this clone. Overlapping regions of clones are only sequenced and submitted once, so the sequence for the remainder of the insert may be found in the record for the adjacent clones. Overlapping clones are noted at the beginning and end of the Features listing.

ANNOTATION OF FEATURES:

STSs are identified using ePCR (Genome Res. 7:541-550) searches of a local database that includes entries from dbSTS, GDB, and local mapping efforts.

Repeats are identified using RepeatMasker (A. Smit and P. Green, unpublished.) for Human and Mouse sequences.

Genes and Region of sequence similarity are identified by BLAST (Nuc. Acids Res. 25:3389-3402) similarity (expect < 1e-34) to the EST and cDNA sequences. Genes demonstrate at least two exons flanked by consensus splice sites that maintained sequence continuity across the splice junctions. Sequences that are not identical matches are annotated as similar.

SEQUENCING READ COVERAGE: Sequencing is completed to a minimum standard of double strand coverage with a minimum of 2 clones and 2 reads with no ambiguities or 2 chemistries with a minimum of 2 clones and 3 reads with no ambiguities. If the sequence quality for a region does not meet this standard, it will be indicated in the annotation as Low Coverage.

QUALITY OF INDIVIDUAL BASES:This sequence meets.stringent quality standards - estimated error rate less than 1 per 10,000 bases. Reports of lowest quality individual bases and measures of base quality are listed below. Description of the metrics can be found

at URL: http://gc.bcm.tmc.edu:8088/quality.info/genbank.annotation.

```

CLONE LENGTH: This sequence does not necessarily represent the entire insert of this clone. Overlapping regions of clones are only sequenced and submitted once, so the sequence for the remainder of the insert may be found in the record for the adjacent clones. Overlapping clones are noted at the beginning and end of the Features listing.

ANNOTATION OF FEATURES:

STSs are identified using ePCR (Genome Res. 7:541-550) searches of a local database that includes entries from dbSTS, GDB, and local mapping efforts.

Local mapping error. See the property of the p identical matches are annotated as similar. SEQUENCING READ COVERAGE:Sequencing is completed to a minimum standard of double strand coverage with a minimum of 2 clones and 2 reads with no ambiguities or 2 chemistries with a minimum of 2 clones and 3 reads with no ambiguities. If the sequence quality for a region does not meet this standard, it will be indicated in the annotation as Low Coverage. QUALITY OF INDIVIDUAL BASES:This sequence meets stringent quality standards - estimated error rate less than 1 per 10,000 bases. Reports of lowest quality individual bases and measures of base quality are listed below. Description of the metrics can be found at URL: http://gc.bcm.tmc.edu:8088/quality.info/genbank.annotation.

319737 bp DNA linear HTG 04-JUL-2002 us chromosome UNK clone RP23-191M12, WORKING DRAFT 14 unordered pieces. J.D. and Waterston, R.H. bmission (04-JUL-2002) Genome Sequencing Center, 4444 Forest Park St. Louis, MO 63108, USA Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi; Eutheria; Rodentia; Sciurognathi; Muridae; Murinae; Mus. his is a 'working draft' sequence. It currently s of 14 contigs. The true order of the pieces known and their order in this sequence record is ry. Gaps between the contigs are represented as N, but the exact sizes of the gaps are unknown. cord will be updated with the finished sequence as it is available and the accession number will de: WUGSC http://genome.wustl.edu/gsc/index.shtml submissions@watson.wustl.edu ---- Project Information oject name: M_BA0191M12 shington University Genome Sequencing Center 18875: gap of unknown length 27060: contig of 8185 bp in length 27160: gap of unknown length 36165: contig of 9005 bp in length 36165: contig of 9005 bp in length 36265: gap of unknown length 42870: contig of 6505 bp in length 42870: gap of unknown length 83118: contig of 40948 bp in length 83118: contig of 40948 bp in length 109449: contig of 25531 bp in length 106549: gap of unknown length 176791: contig of 67242 bp in length 176891: gap of unknown length 318952: contig of 99048 bp in length 318952: contig of 99048 bp in length 318952: contig of gap of unknown length ing vector: M13; 0% in a vector: M13; 0% in a vector: M13; 0% in a vector: M13; 0% of reads ry: Dye-primer ET: 0% of reads ry: Dye-terminator B1g Dye; 100% of reads y program: Phrap; version 0.990319 us quality: 309491 bases at least Q40 us quality: 313307 bases at least Q20 6: contig of 1316 bp in length

                    This DNA encodes a tumour antigen protein (SART-3) which is recognized by cytotoxic T-cells binding to HLA antigen. SART-3 can be expressed by standard recombinant methodology. SART-3 and its peptide derivatives can be used in the prevention, treatment and diagnosis of tumours in vitro or in vivo.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              420
                                                                                                                                                                                                                                                                                                                                                                        nucleic acid molecules encoding such proteins. The IFPs comprise a polypeptide antigen component and an immunostimulatory component derived from the intracellular domain of HBR-2 protein Which is effective to elicit a protective dendritic cell (DC)-induced T-cell mediated cellular immune response to the antigen. IFP or superactivated dendritic cells are used to treat cancer e.g. breast carcinoma, ovarian and colon cancer associated with a particularly antigen. The present sequence is a fusion DNA which comprises DNA molecules encoding human squamous cell carcinoma antigen, SART3-IC and mature human HBR-2 membrane distal

	CC The invention relates to nucleic acids (AA198058-AA198161) or their cC homologues expressed by human neuroblastoms useful for detecting genes CC expressed by neuroblastomm and for analysing their structure and CC inction. The nucleic acids are useful for the diagnosis and prognosis of	Sequence	Query Match 35.1%; Score 1331.2; DB 22; Length 1403; Best Local Similarity 99.8%; Pred.                                                                                                                                                                                                                                                                                                          The present invention provides the protein and coding sequences of 973 mean testicular antigens, and fragments of their genomic sequences. The sequences can be used in the treatment of cardiovascular, urinary system, reproductive system, immune, respiratory, neurological and sastrointestinal disorders, infections, and particularly cancer, especially testicular cancers. The present sequence is a DNA encoding a protein fragment of the invention.

Cor identifying expressed genes. (1) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in clayoratics, forensics, gene mapping, identification of mutations responsible for genefic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and amino acid sequences. AAS64197-AAS94564 represent novel human or degenerate data for this patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO. It fip. wipo.int,pub/published_pct_sequences.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 GCCCGCTGGGAAATGTGCCGTAGATGTGGAGCCCCCTTCGAAGCAGAAGGAAAGGC

tissue sources. The SESTs can have a range of activities depending on the tissues they were isolated from numan, mouse, chicken and rat tissue sources. The SESTs can have a range of activities depending on the tissues they were isolated from. The activities include: Chemotactic; proliferative; immunomodulatory; haematopoietic; chemotactic; antibacterial; antifungal; antiviral; antibabeterial; antifungal; antiviral; antidiabetic; antipartimatic; vulnerary; antiulcer; osteopathic; neuroprotective; nootropic; antiparkinsonian; antipsoriatic; cerebroprotective; anticonvulsant; and antidepressant. The SESTs can be used for gene therapy and in vaccines. The SESTs can be used for gene therapy and in vaccines. The SESTs are useful as probes for the molecules which correspond to the SESTs. Proteins encoded by the SESTs are useful in assays for determining biological activity and raising are useful in assays for determining biological activity and raising are useful in assays for determining biological activity and raising (multipole scherosis, insulin dependent diabetes), allergic conditions (asthma), myeloid or lymphoid cell deficiencies, wounds, burns, ulcers,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                332
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      osteoporosis, osteoarthritis, central nervous system disorders (Alzheimer's, Parkinson's, Huntington's disease, stroke), coagulation disorders (haemophilia, thrombosis), inflammatorry disorders (Crohn's disease), tumours, bacterial, fungal or viral infections, depression and psoriasis. COPULATION OF (III) and tigen presenting cells that express (III).

COPULATION OF (III) and tigen presenting cells that express (III).

COPULATION OF (III) and cativity. An oligonucleotide (IV) that hybridises to (IV) has cytostatic activity. An oligonucleotide (IV) that hybridises to (SI) can be used for detecting ovarian cancer in a patient of polynucleotide hybridising to (IV) and comparing the amount of polynucleotide hybridising to (IV) and comparing the amount to patient, where the amount of polynucleotide hybridising to (IV) is detected preferably by polynucleotide hybridising to (IV) is detected preferably by polynucleotide hybridising and/or expanding T cells specific for an ovarian tumour protein comprising contacting T cells

and immunostimularits; and a polypeptide (II) of a ovarian tumour polypeptide and immunostimularits; and a polypeptide (III) having a cDNA sequence (S1) from the 10912 nucleotide sequences as given in ABL77023 to ABL87934, (III) encoding (II) having a sequence (S2), a T cell population of (II), or antigen presenting cells that express (II).

(I) has cytostatic activity. An oligonucleotide (IV) that hybridises to (I) has cytostatic activity. An oligonucleotide (IV) that hybridises to (S1) can be used for detecting ovarian cancer in a patient's biological sample preferably serum or ovarian tissue. The method comprises contacting a biological sample from a patient with (IV), detecting the amount to a predetermined cutoff value and thereby detecting ovarian cancer in the patient, where the amount of polynucleotide hybridising to (IV) is detected preferably by polymerase chain reaction (PCR). (I) comprising (III) and/or (II) is useful for stimulating and/or expanding T cells with (III) or (II). (III) is useful in design and preparation of the tumour polypeptides and proteins in tumour cells; and to isolate a full length gene from a rechniques.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       3242

7-transmembrane G-protein coupled protein receptors (7TM-GPCRS). The present sequence is one such murine 7TM-GPCR coding sequence. The present sequence was derived from stromal stem cells. The present sequence and its corresponding protein are useful in the prevention, diagnosis and treatment of diseases associated with inappropriate 7TM-GPCR expression. TYM-GPCRs identify specific signalling molecules, to activate an effector signalling cascade that triggers an intracellular response and eventually a biological effect.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        e,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     618

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               AAK54951 to AAK64702 encode the human immune/haematopoietic antigen (I) acmino acid sequences given in AAM82170 to AAM91921. (I) have cytostatic activity, and can be used in gene therapy and vaccine production. (I) proteins and polynucleotides may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate (I) expression. For example, they may be used to treat disorders associated with decreased expression by rectifying mutations or deletions in a patient's genome that affect the activity of (I) by expressing inactive proteins or to pulynucleotides may be used to produce the secreted (I), by inserting the nucleic acids into a host cell and culturing the cell to express the protein. (I) proteins and polynucleotides may be used to produce the secreted (I), by inserting protein. (I) proteins and polynucleotides may be used to produce the secreted diseases, especially cancers and concernmentalses of haematopoietic-related diseases, especially concernmentalses of haematopoietic-derived cells. encode proteins. They are useful for gene discovery, and for determining predisposition and/or prognosing breast disease. Gene expression analysis is useful for assessing the toxicity of chemical agents on cells. The microarray of this invention presents a far greater diversity of probes for measuring gene expression, with far less bias than expressed sequence tag microarrays. The method is suitable for rapid production of functional information from genomic sequence. The present sequence is a single exon nucleic acid probe of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly
                                                                                                                                                                                                                                                                                                                                                                                                                                               nucleic acid probes for measuring gene expression in a sample derived from human breast and BT 474 cells. The method involves contacting the probes with a collection of detectably labelled nucleic acids
                                                                                                                                                                                                                                                                                                                                                                                    The invention relates to a spatially-addressable set of single exon
New spatially-addressable set of single exon nucleic acid probes, useful for measuring gene expression in sample derived from human breast, comprises number of single exon nucleic acid probes
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               derived from mRNA of human breast, and then measuring the label
bound to each probe of the microarray. The probes are useful for
verifying the expression of regions of genomic DNA predicted to
                                                                                                                                                                                                                                                        Claim 4; SEQ ID NO 7826; 327pp + sequence listing; English.

                                                                                                                                                                                                                                                                                                                                                                                                measuring human gene expression in a sample derived from human foetal liver. The single exon nucleic acid probes may be used for predicting, measuring and displaying gene expression in samples derived from human fetal liver. The present sequence is a single exon nucleic acid probe of the invention.
                                                                                                                                                                                                                                                                                                                                                 AAGGCTGACGGAGGAGGATGAGGTTAAGGCCGCTAGGACAAGGAGAAAGGTGTTATCG

Caim 4; SEQ ID No 12604; 530pp; English.
XX
CC
The present invention relates to single exon nucleic acid probes for
measuring human gene expression in a sample derived from human heart. The
CC measuring and displaying gene expression in samples for
predicting, measuring and displaying gene expression in samples derived
CC producting, measuring and displaying gene expression, the
CC probes are useful for predicting, diagnosing, grading, staging,
CC monitoring and prognosing diseases of the human heart and vascular system
CC congenital heart disease, hypertension, cardiac arrhythmias and
CC congenital heart disease.
CC Note: The sequence data for this patent did not form part of the printed
CC Specification, but was obtained in electronic format directly from WIPO

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Description
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Sequence Sequence Sequence 2
